Ritvika Nagula

MACHINE LEARNING ENGINEER · FULL STACK WEB DEVELOPER · DATA ENTHUSIAST
CURRENTLY AVAILABLE
(857)-389-4592 | ritvikareddy18@ccs.neu.edu | www.ritvika.com | LinkedIn: ritvika-reddy-nagula | GitHub: nagula-ritvika

Work Experience

Trifacta Inc. *San Francisco, CA*

MACHINE LEARNING (SE) INTERN *Jan. 2018 – Aug. 2018*

- Built a machine learning model to suggest join keys with a ~20% increase in accuracy by wrangling user logs to generate training data.
- Integrated a back-end machine learning model which provides source pattern to target pattern standardization suggestions with the front-end user interface.
- Analyzed product logs to determine the new user retention rates and churn values in a conversion funnel.

Education

Northeastern University *Boston, MA*

MASTERS IN COMPUTER AND INFORMATION SCIENCE - 3.42/4 *Sep. 2016 - Dec. 2018*

- Machine Learning, Data Mining, Programming Design Paradigm, Managing Software Development, Parallel Data Processing Using Map Reduce, Foundations of Artificial Intelligence, and Algorithms

National Institute of Technology *Raipur, India*

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE AND ENGINEERING - 8.35/10 *May 2016*

- Analysis and Design of Algorithms, Data Structures, DBMS, Operating Systems, Compiler Design, Computer Networks

Skills

Languages: Java, Scala, Python, R, C/C++, Ruby, SQL
Frontend Web Design: HTML5, CSS3, Bootstrap, JavaScript (also ES6), JQuery, React.js, Redux, LESS, SASS
Backend Web Technologies: SOAP and REST API, Node.js, Express, Django, MongoDB
Tools: Spark, Hadoop, Weka, Heroku, AWS, Sahi Pro

Technical Projects

Facial Emotion Recognition

Python, Keras, Tensorflow, Jupyter Notebook

- Built a deep convolutional neural network (CNN) to recognize and classify the human emotion in the images from the Kaggle FER 2013 dataset using Tensorflow wrapped in Keras on Google Cloud Platform

Predicting Song Downloads

Scala, Spark, R, ggplot2

- Efficiently predicted the number of downloads of songs from the Million Songs Dataset by implementing a linear regression model in Spark using Scala and performed data analysis of both raw data and results in R

Boston Public Schools Transportation Problem

Java, Agglomerative Clustering, Agile

- Effectively utilized a hierarchical clustering algorithm in Java as a member of an Agile team to efficiently assign bell-times of schools in order to minimize the number of buses servicing the schools

Mining Yelp Reviews

Python, Spark, Jupyter Notebook

- Devised a new system of user specific ratings for restaurants by analyzing the latent criteria of reviews from the Yelp Dataset by implementing Latent Dirichlet Allocation in Python and Spark

Sentiment Analysis of Tweets

Python, Scikit-Learn, NLTK, Tweepy API

- Analyzed the opinion of the public towards a sale conducted by an e-commerce website in India for 5 days by collecting live tweets and developing a model to determine the polarity of the tweets using machine learning and natural language strategies in Python, Scikit, and MySQL {Link - IEEE Research Paper}

Extra Projects

The Good Reader Bot, a Facebook chatbot integrated with the Goodreads API to get information about books
Document Classifier, a Python Flask app deployed on Heroku to classify documents using Random Forest Classifier
IRC-Chatroom, a clone of IRC chatroom implemented using Node.js, Sockets.io and Express
Typing.js, a micro-plugin coded in JavaScript to emulate typing animation effect in a browser
Word-A-Diction, an Android application to help improve the vocabulary of the users using AndroidStudio
